

BOTANICAL PHARMACOLOGY & THERAPEUTICS

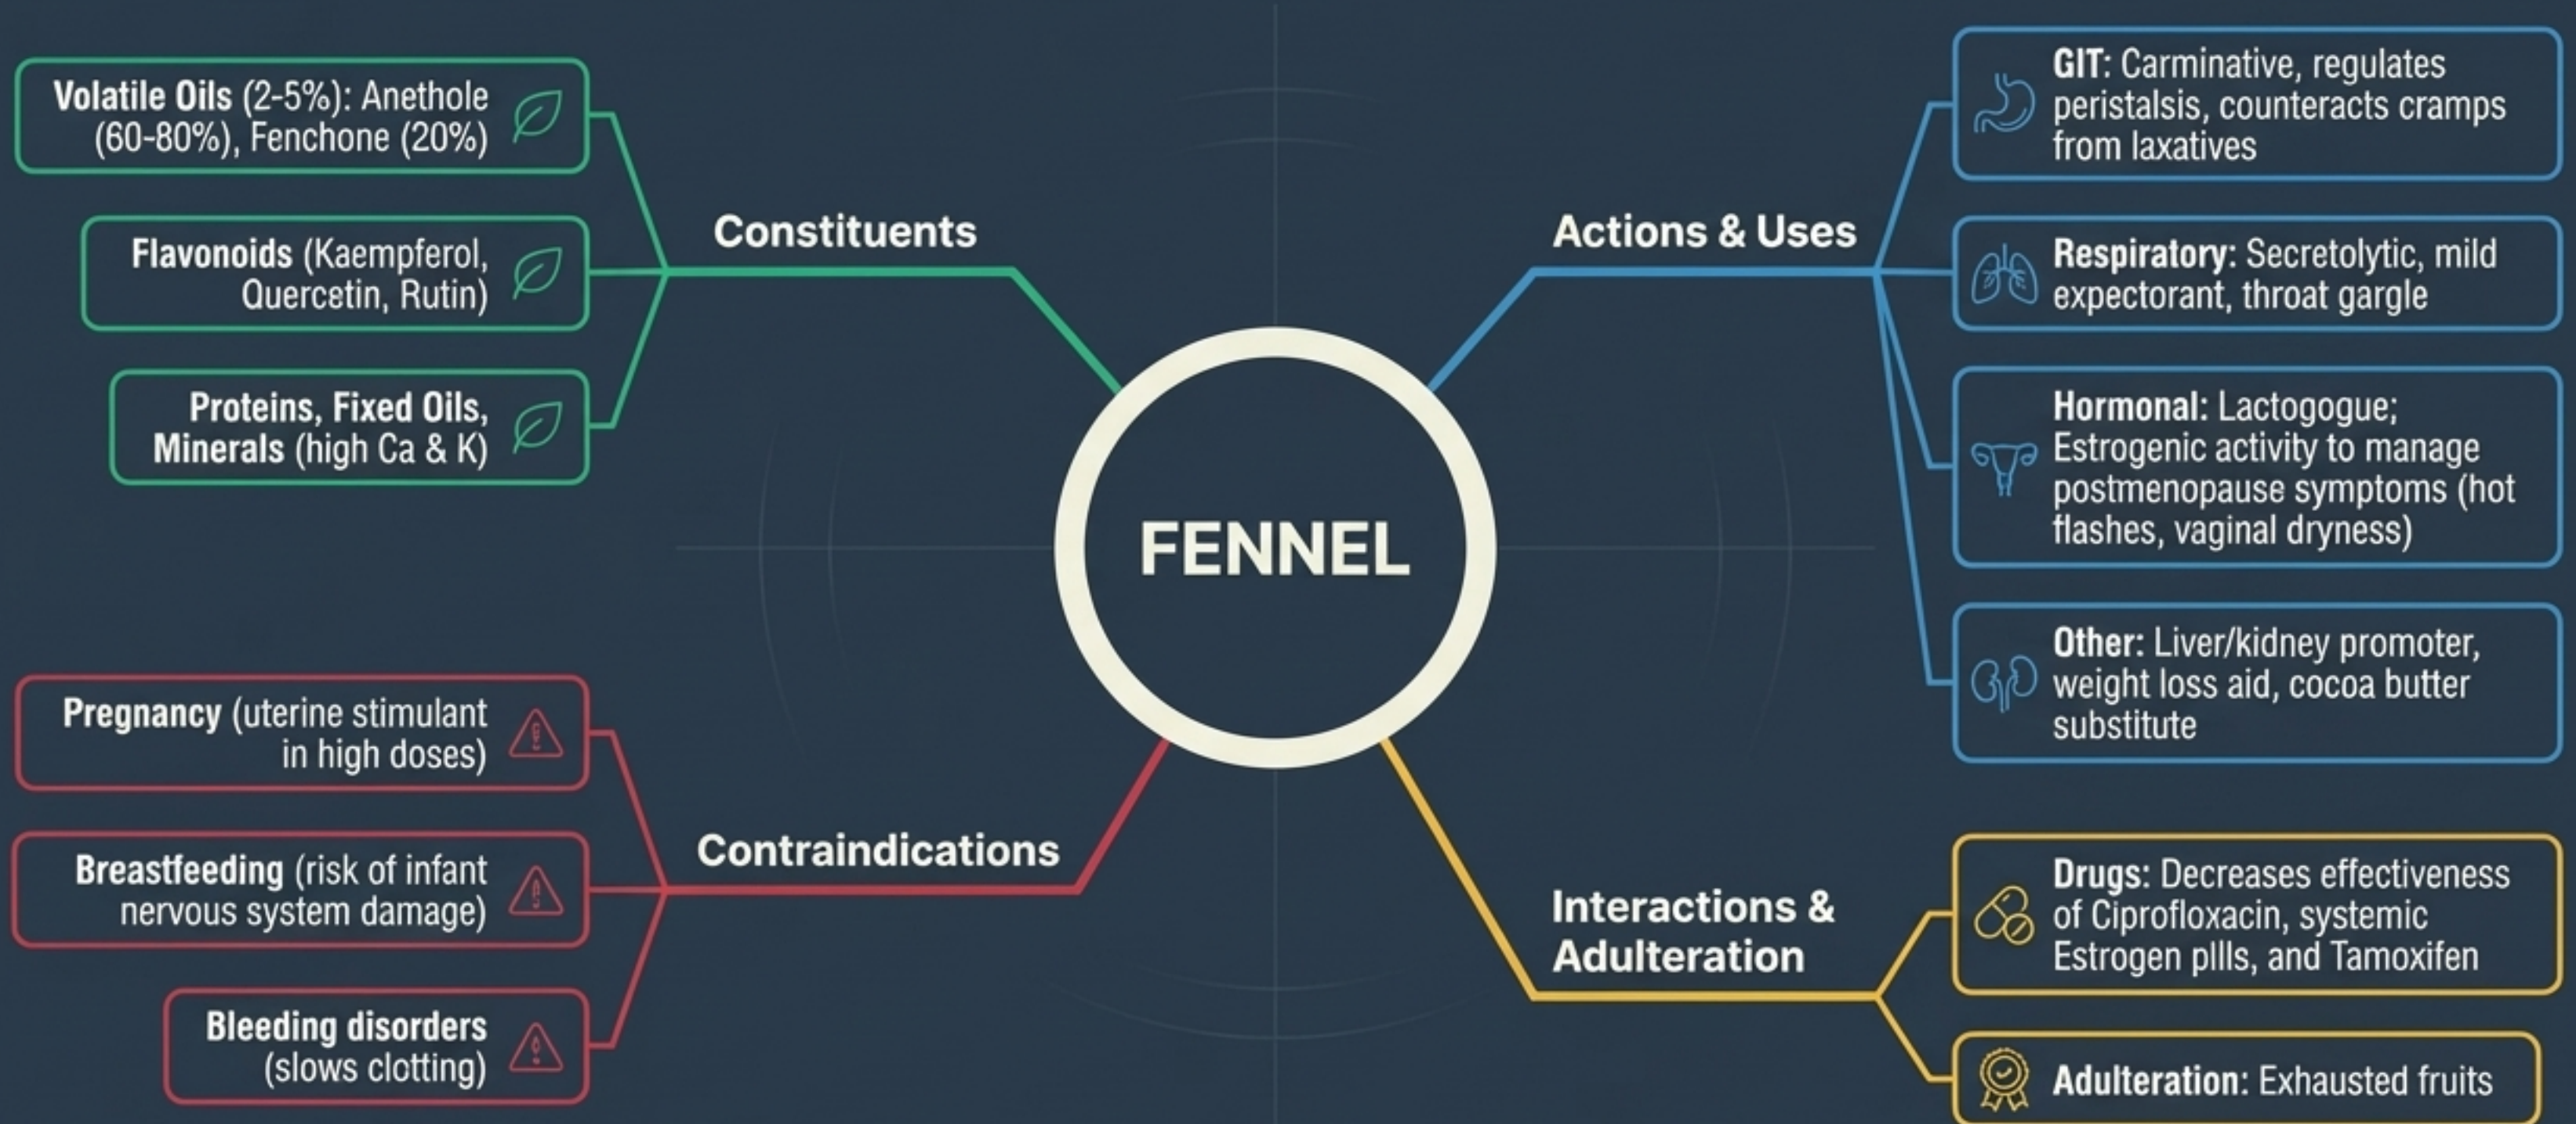

Clinical Mind Maps: Constituents, Actions, and Applications

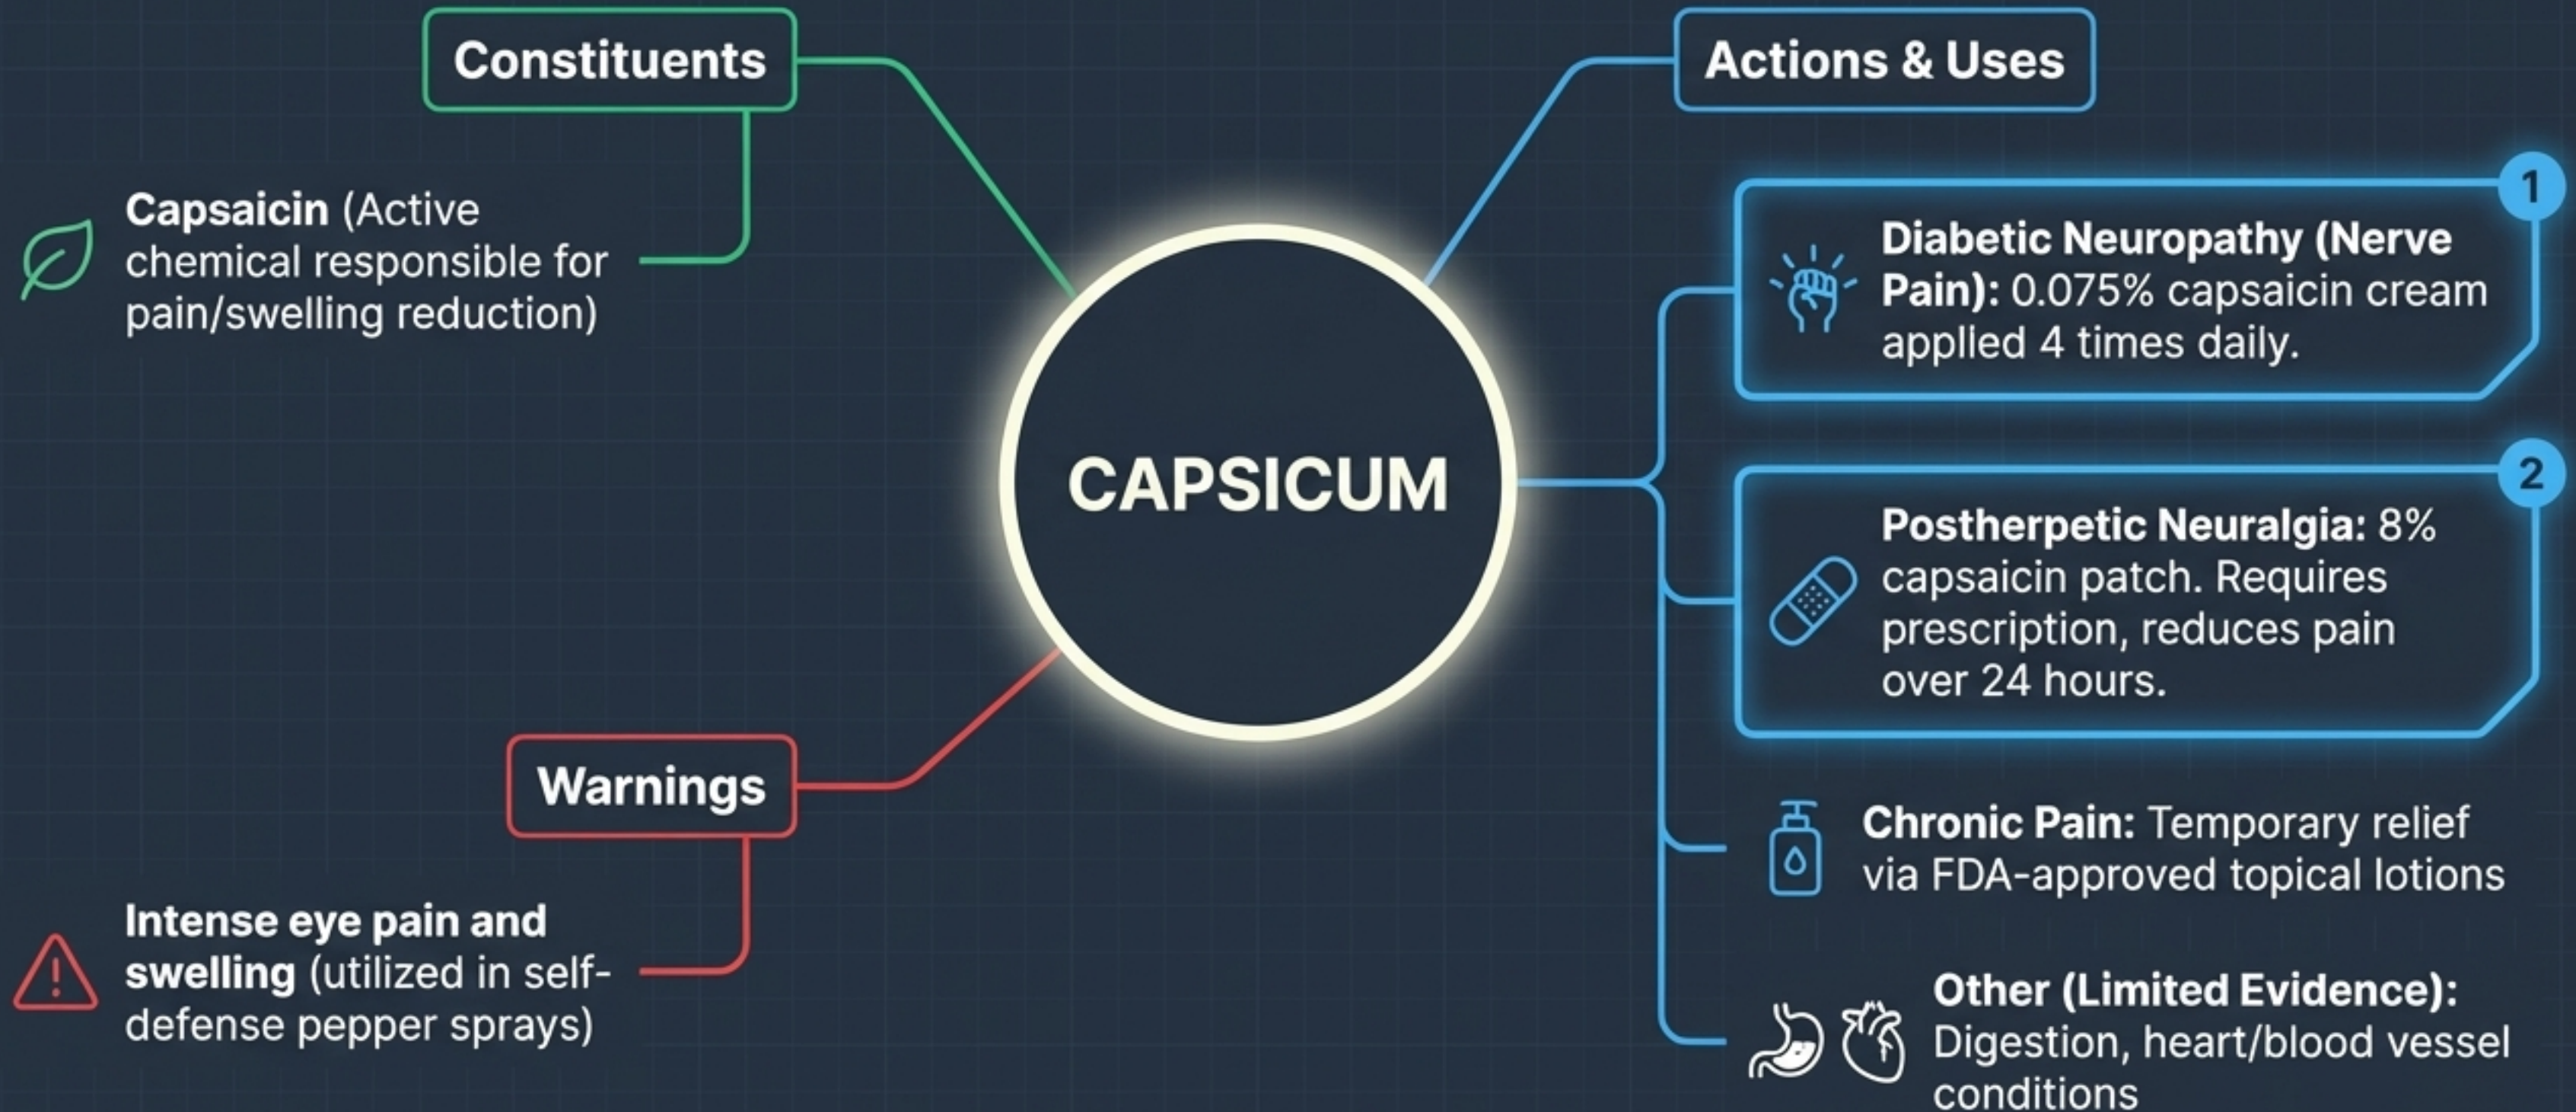

The Therapeutic Landscape

 Gastrointestinal (GIT)	 Central Nervous System (CNS)	 Pain & Inflammation	 Women's Health / Uterine
Fennel: Spasmolytic, regulates peristalsis, carminative.	Cannabis: Cerebral stimulant, sedative in mania, anti-emetic.	Capsicum: Neuropathy, postherpetic neuralgia.	Fennel: Estrogenic activity (postmenopause), lactagogue.
Mentha: Cholaretic, cholagogue, digestive, anti-emetic.	Ergot: Migraine treatment, hallucinogenic (in toxicity).	Cannabis: Analgesic.	Ergot: Labor initiation, postpartum hemorrhage reduction.
		Mentha: Local anesthetic (topical).	

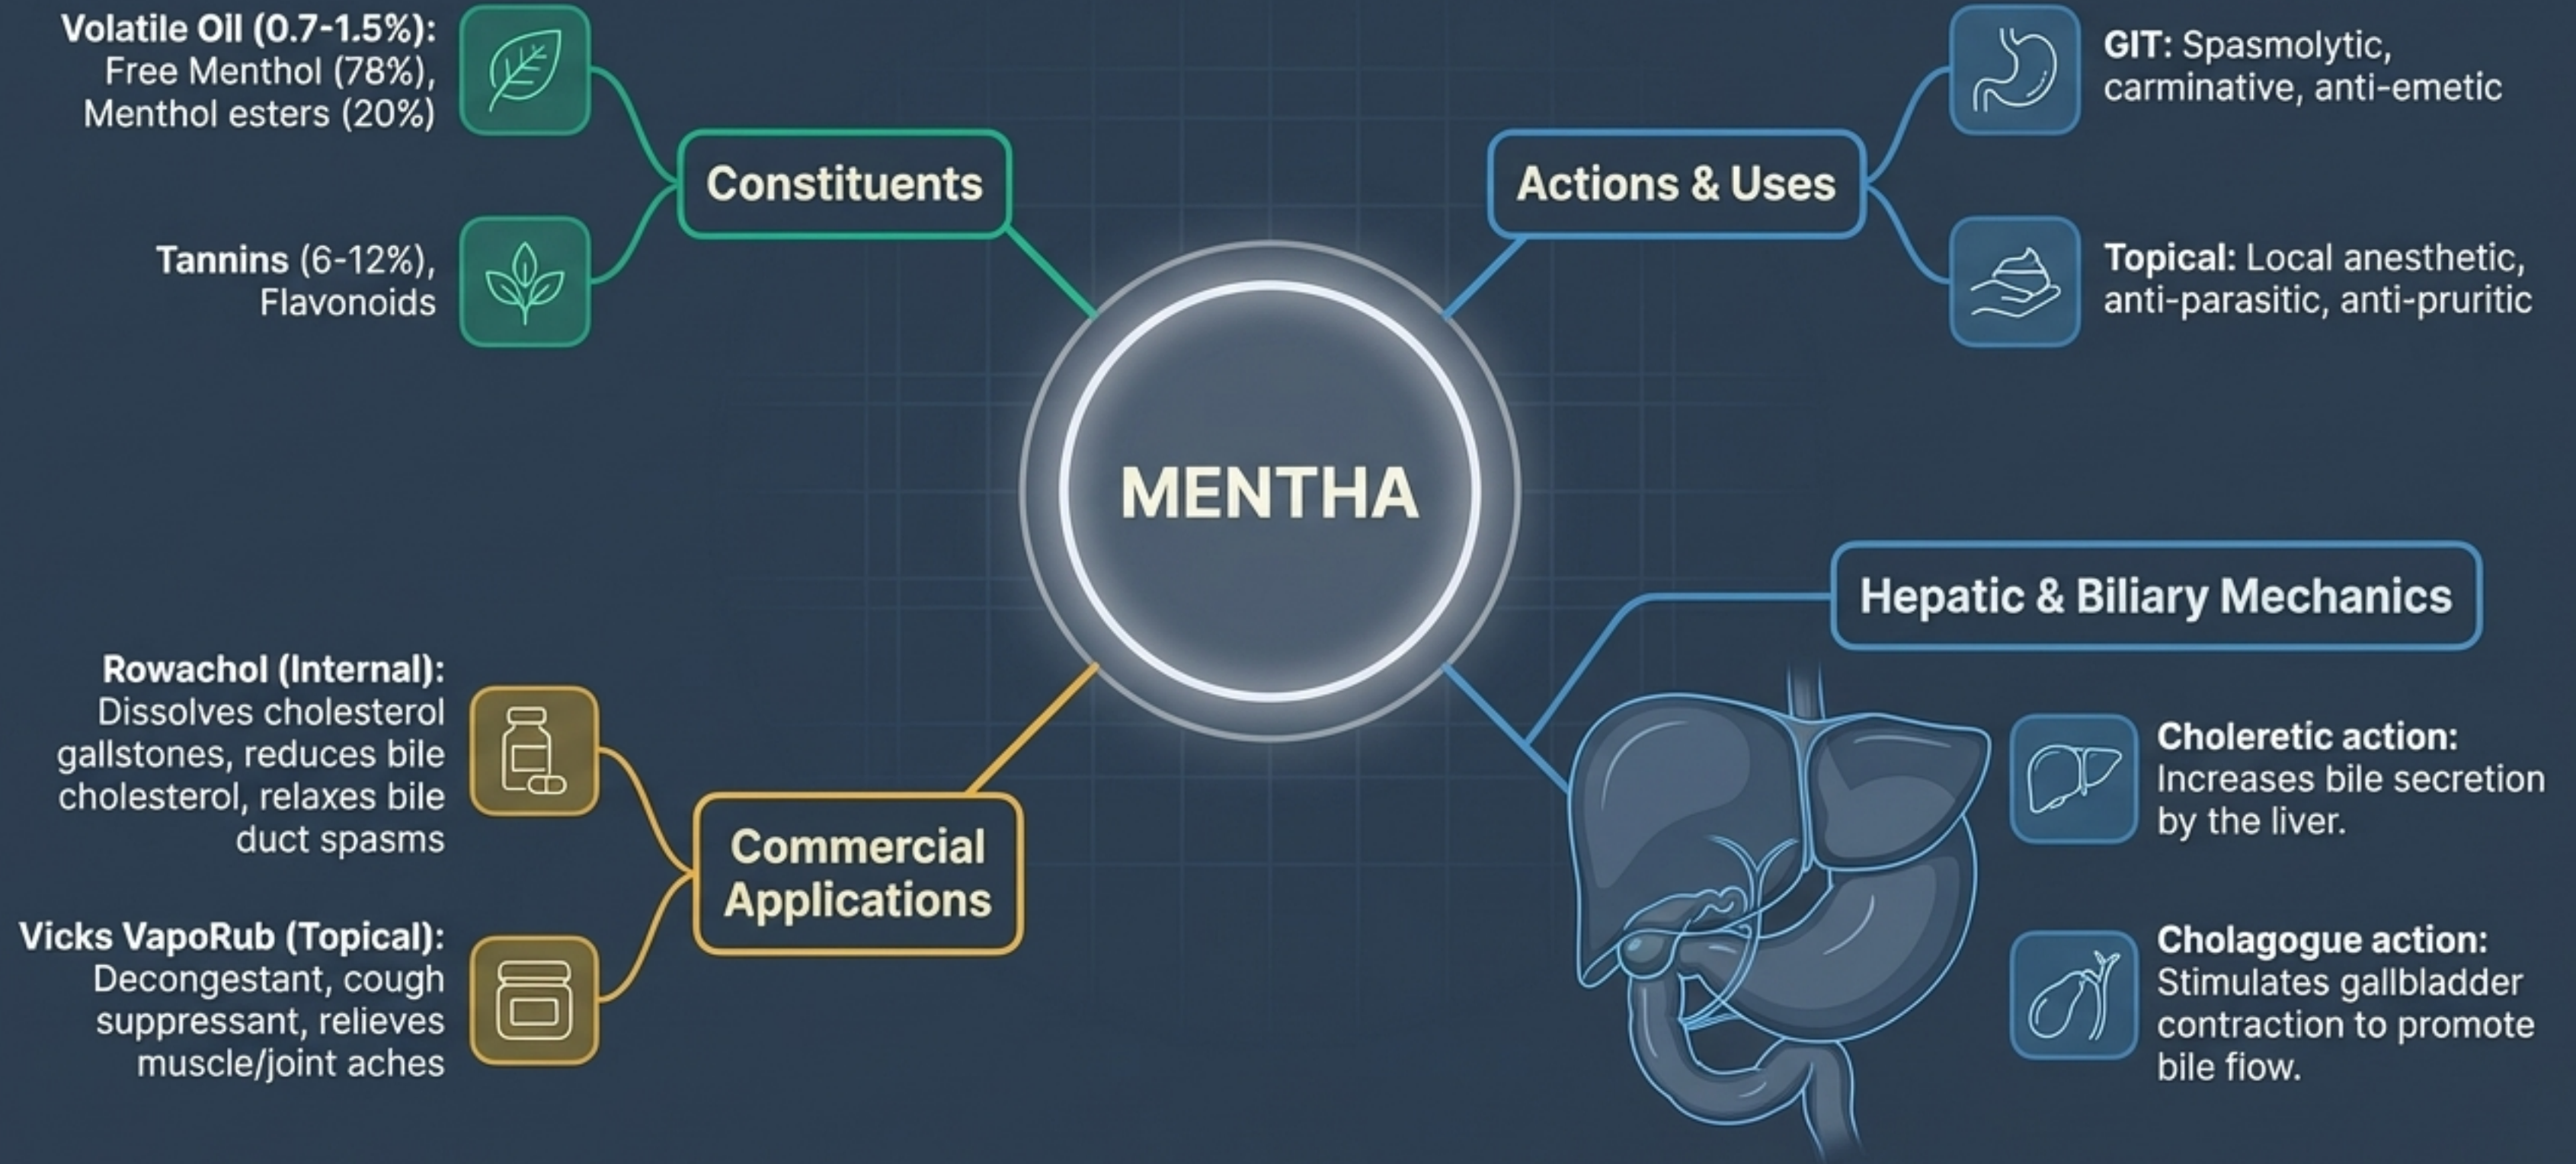

Clinical Profile: Fennel (Fruit)

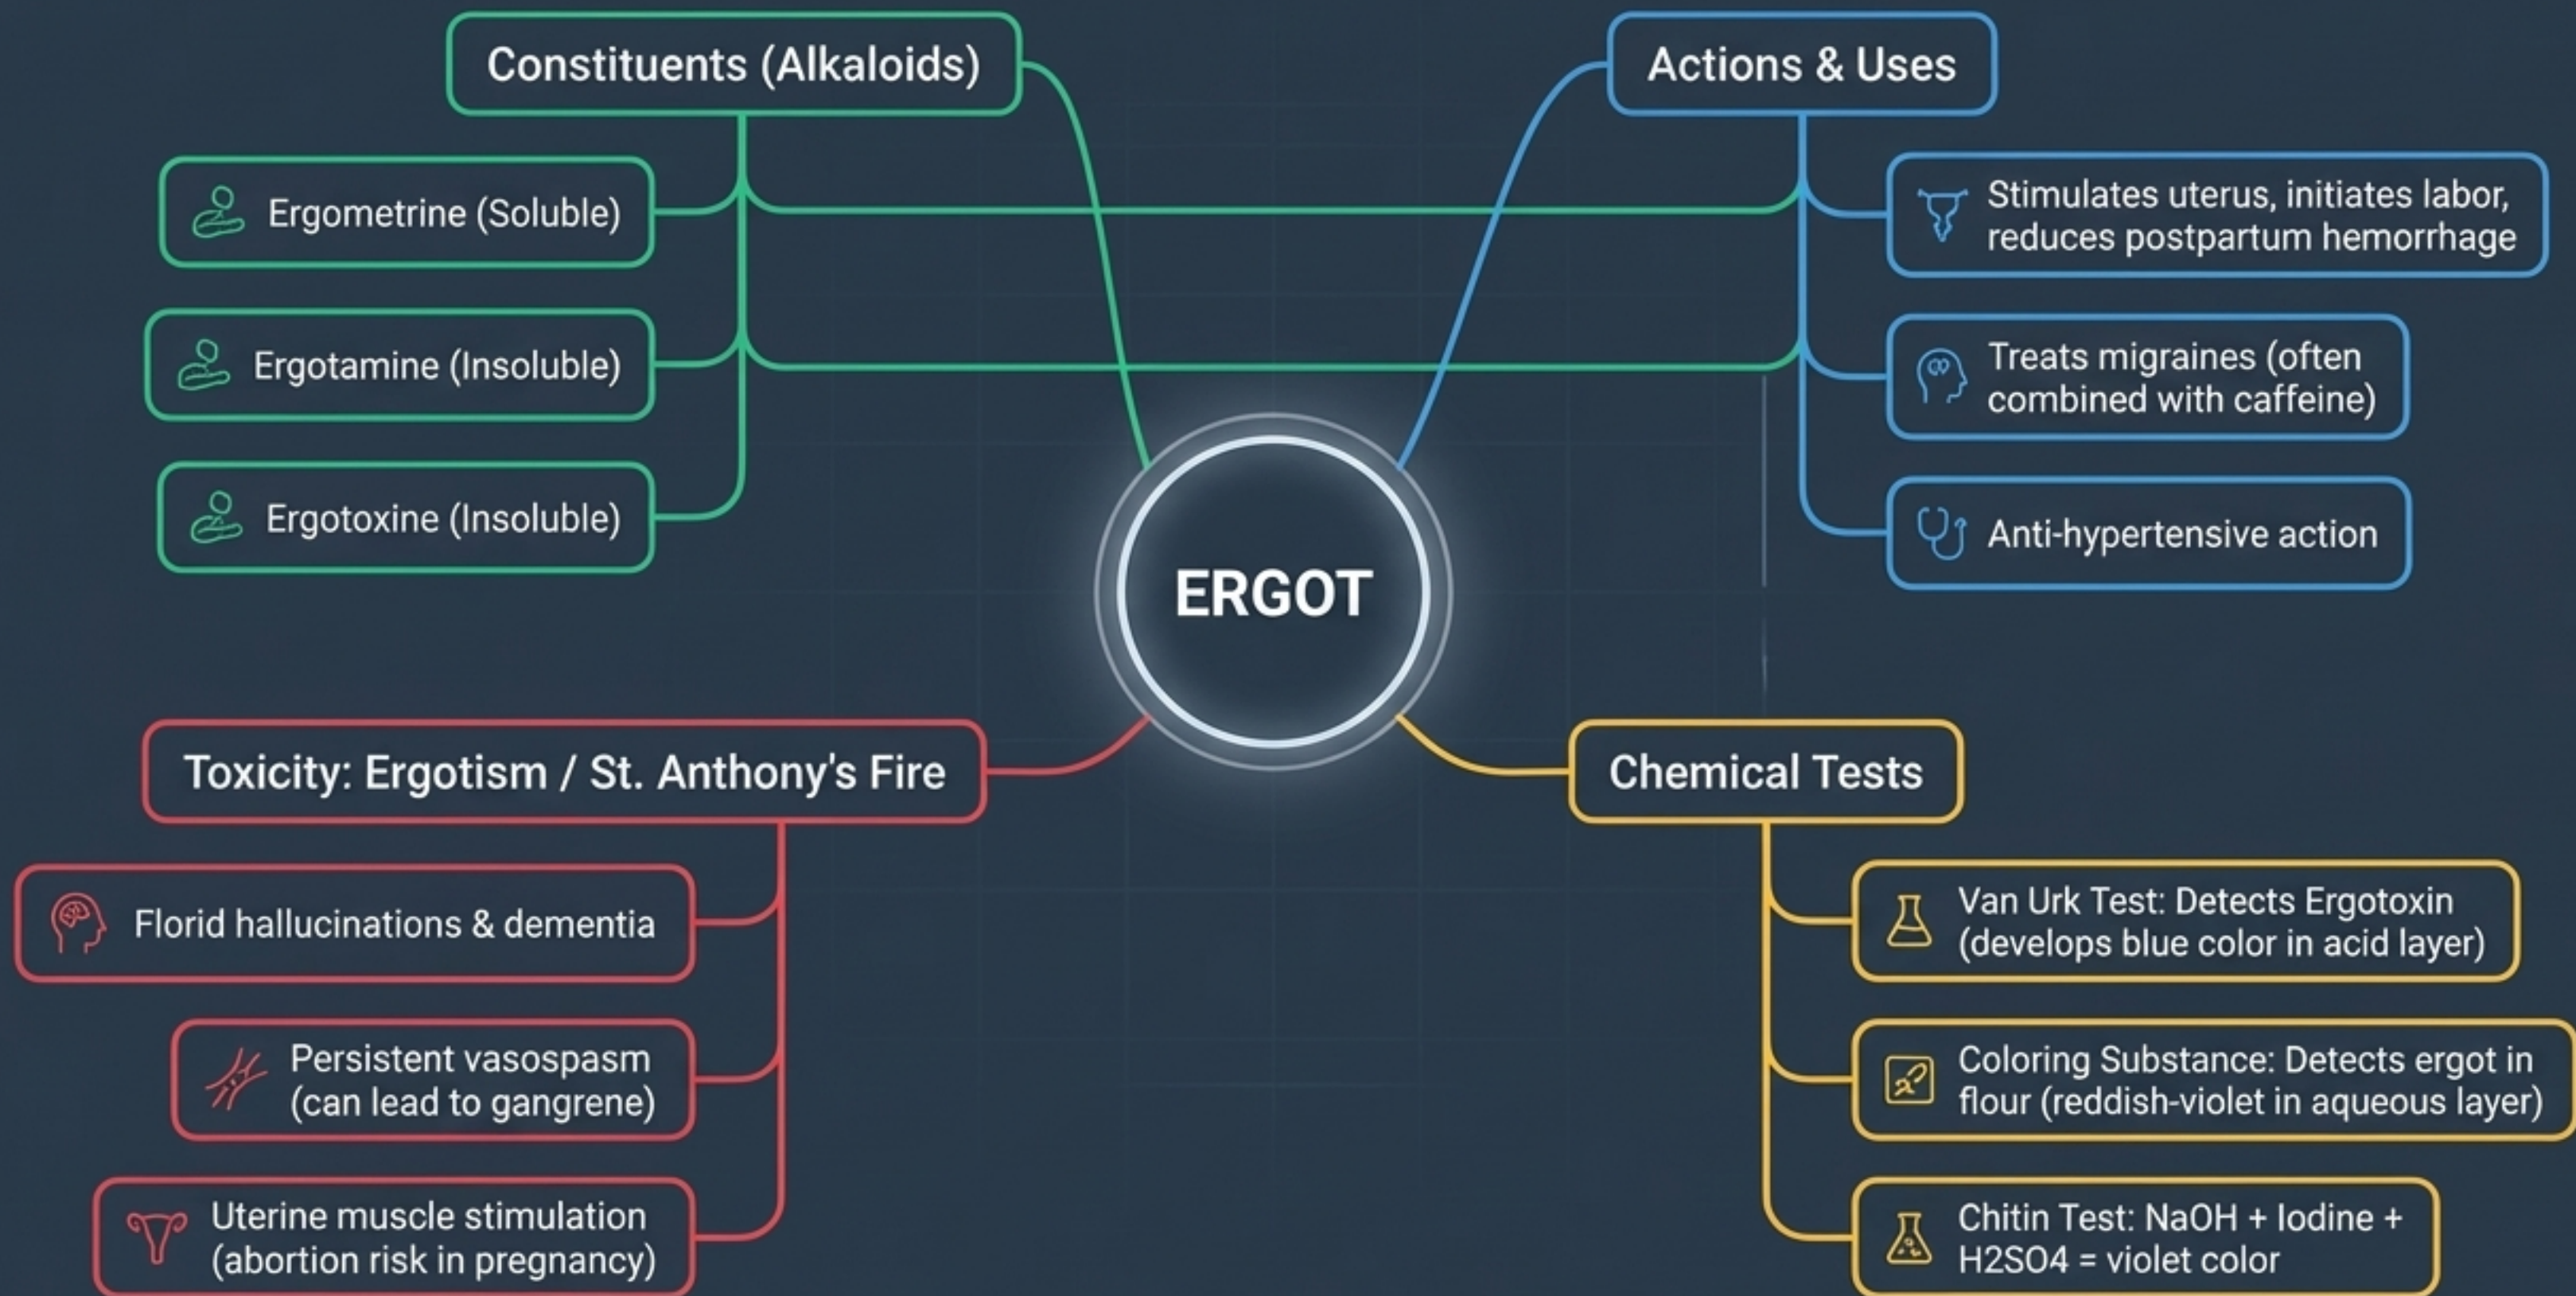

Clinical Profile: Capsicum (Fruit)

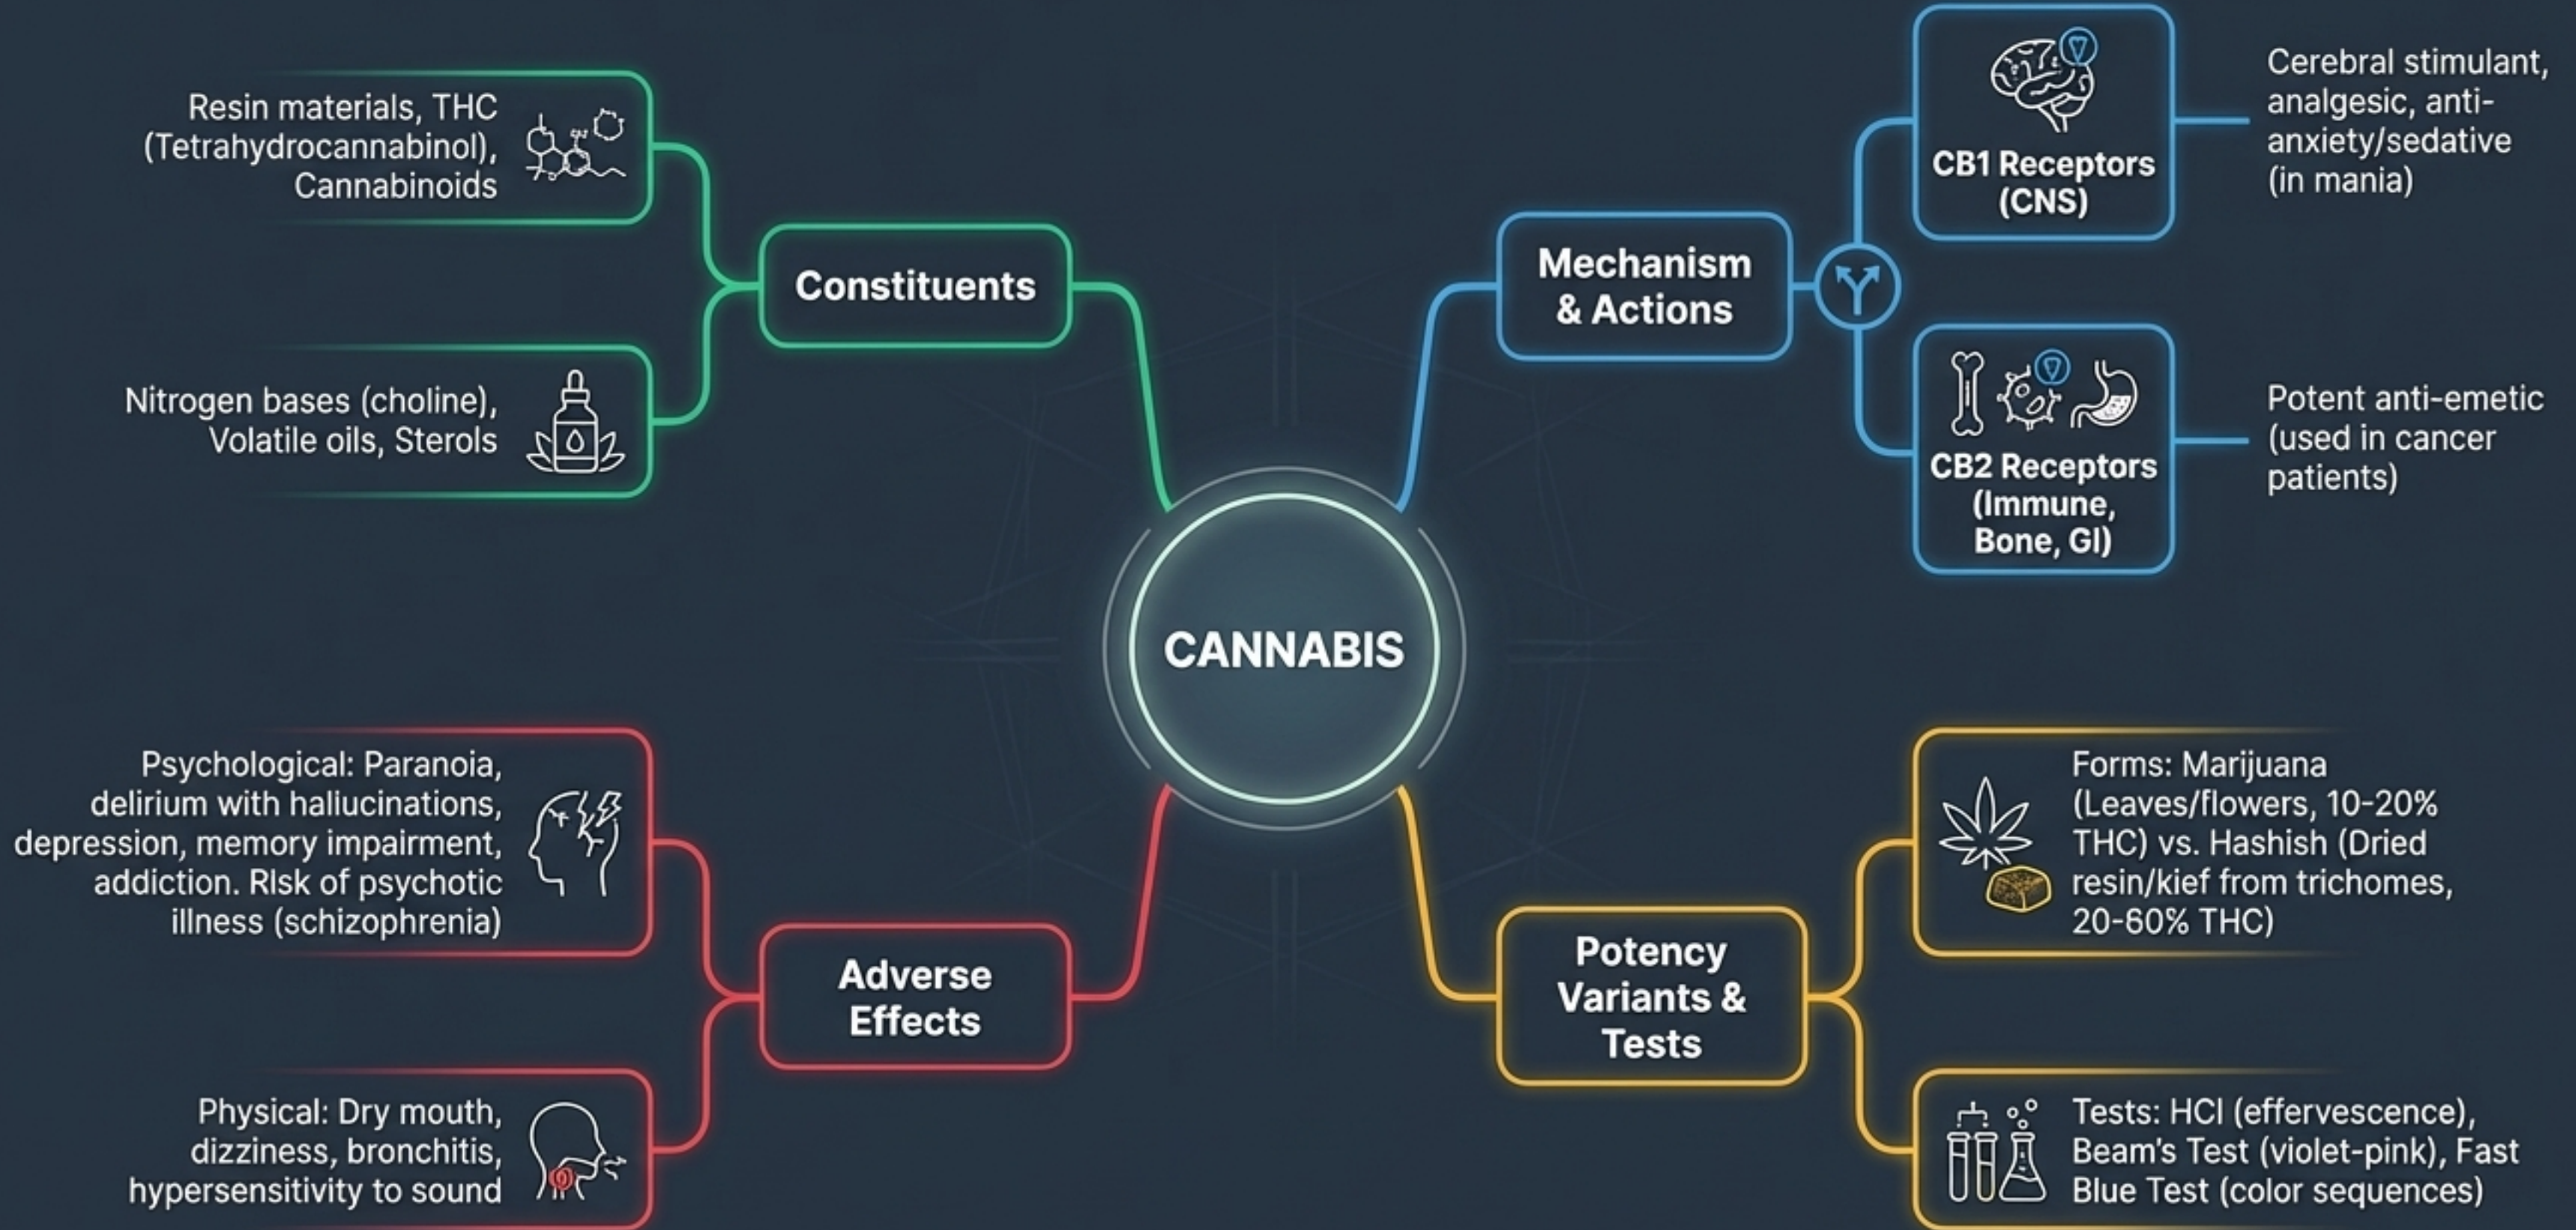

Clinical Profile: Mentha (Herb)

Clinical Profile: Ergot (Fungus/Herb)

Clinical Profile: Cannabis (Herb)

Toxicology & Warning Synthesis

Uterine Dangers (Pregnancy Contraindications)

- **Ergot:** Unwanted uterine stimulation leading to severe abortion risk.
- **Fennel:** High doses act as a systemic uterine stimulant.

Psychological & CNS Dangers

- **Cannabis:** Paranoia, delirium, risk of drug-induced schizophrenia/psychosis.
- **Ergot:** Dementia, florid hallucinations (Ergotism/St. Anthony's Fire).

Drug Interaction Risks

- **Fennel:** Highly interactive. Blocks effectiveness of Ciprofloxacin (antibiotic), Estrogen pills, and Tamoxifen (hormone therapy).
