

Pharmacology / Histology Revision (Excluding Nerve)

Muscle Types Comparison

Feature	Skeletal	Cardiac	Smooth
Shape	Long cylindrical	Branching	Spindle-shaped
Nuclei	Multiple peripheral	Single central	Single central
Striation	Yes	Yes	No
Control	Voluntary	Involuntary	Involuntary
Regeneration	Limited	Very poor	Good

Thick vs Thin Skin

Feature	Thick Skin	Thin Skin
Location	Palms & soles	Rest of body
Epidermis	Thick	Thin
Dermis	Thin	Thick
Hair	Absent	Present
Sebaceous glands	Absent	Present

Eccrine vs Apocrine Glands

Feature	Eccrine	Apocrine
Location	All body	Axilla
Secretion	Watery	Protein-rich
Duct	Skin surface	Hair follicle

Layers of Epidermis

Basal → Spinous → Granular → (Clear in thick skin only) → Cornified

General Structure of GIT

Mucosa (Epithelium + Lamina propria + Muscularis mucosa) → Submucosa → Muscularis → Serosa

Small vs Large Intestine

Feature	Small Intestine	Large Intestine
Villi	Present	Absent
Paneth cells	Present	Absent
Goblet cells	Moderate	Abundant

Liver Key Points

Hepatic lobules with central vein and portal triad (portal vein, hepatic artery, bile duct).

Functions: bile secretion, detoxification, protein synthesis, glycogen storage.
